

What is CSS

CSS stands for Cascading Style Sheets. It is a language used to describe the appearance and layout of HTML elements. It allows you to control the look and behavior of the elements on a web page. CSS is used to separate the presentation of the document content from its structure. This is achieved by using CSS to describe how HTML elements should be rendered on the screen. CSS is used to style the HTML elements, such as the text, colors, fonts, and layout. It is a simple and powerful tool for creating beautiful and functional web pages. CSS is used to control the appearance and layout of HTML elements. It is a language that allows you to describe the look and behavior of the elements on a web page. CSS is used to style the HTML elements, such as the text, colors, fonts, and layout. It is a simple and powerful tool for creating beautiful and functional web pages.
